

## Designed to perform. Built to last.

The Jabra GN2000 series contact centre headsets features superb call clarity. Tested to withstand rough handling, yet comfortable enough to wear all day. Best of all, the Jabra GN2000 series offers far more than you would expect from an affordable headset:

- Optimised for contact centre use
- Day-after-day durability due to robust design
- Wideband sound for natural sounding audio quality with Jabra GN2000 IP
- Large ear cushions for extra comfort
- Choice of noise cancelling microphone or SoundTube boom arm

Built to last, the Jabra GN2000 series is our toughest contact centre headset yet. The Jabra GN2000 series is a straightforward, easy-to-use headset. It is available with either a special noise cancelling microphone mounted on a flex boom arm or SoundTube equipped with a standard microphone. Experience crystal clear communications as the noise cancelling microphone reduces unwanted background noise – even in noisy offices.

Large ear cushions provide exceptional comfort thanks to fully gimballed mountings. That means our earpieces automatically adjust to the shape and angle of the ear. And less manual adjustment means your agents can concentrate on their calls and not on their headset.

The Jabra GN2000 series ear cushions also provide better acoustical coupling, ensuring a rich incoming signal. The Jabra GN2000 IP provides full frequency response up to 6,800 Hz, so you can enjoy optimum call clarity. The Jabra GN2000 is the smart alternative for compatibility with telephone systems that are not prepared for wideband telephony.

What is more, this remarkable headset also features our PeakStop™ technology, which cuts off sudden loud noises above 118 dB SPL.

The Jabra GN2000 is also available with a USB connector for dedicated IP applications. Moreover, the Jabra GN2000 USB headset gives agents true stereo-quality sound. Complete with in-line sound controls, the Jabra GN2000 USB is a true plug-and-play product that is Microsoft Windows® compliant.
